Barracuda

When most bike manufacturers talk about their bikes they talk a lot about components. Things like drivetrains and shifters and headsets. There's nothing wrong with that, we do it, too.

But they fail to mention the most important components. The ones that make a bike truly unique. And it's those components that we take the most pride in.

We're talking about the people behind our bikes. The people whose individual efforts come together in a way that makes it possible for us to produce the kinds of bikes you'll see on the next few pages.

You see, we believe that if you're going to put together a quality bike you must first put together a quality team of talented and dedicated people. And that's exactly what we've done.

We've assembled people who take pride in what they do. Everyone from our receptionists to our welders have a passion for the idea of creating something that goes beyond what's expected. They're competitive individuals who wouldn't sleep very well at night knowing they've built a mediocre product. And it's their drive that keeps us at the very front edge of bicycle technology.

What we're trying to say is that everyone can talk about components that go onto a bike. We'd much rather talk about the components that go into our bike. Because it's those components we'd put up against anyone in the industry-- anyone.

Dave Southwell, Jonathan Wege
